

# Change Request - MFA

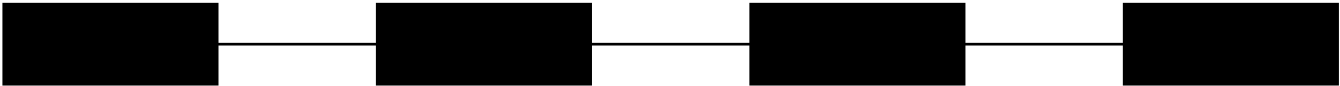

Document ID: CR-001  
Version: 1.0  
Status: Draft

| Section          | Description                                                         |
|------------------|---------------------------------------------------------------------|
| Objective        | Demonstrate a realistic enterprise document for AI impact analysis. |
| Business Need    | Improve operational efficiency while minimizing project risk.       |
| Affected Modules | Authentication, Reporting, User Management, APIs                    |
| Priority         | High                                                                |
| Owner            | Business Analysis Team                                              |

## Overview

This document represents a sample enterprise artifact used during software delivery. It contains structured information that an AI assistant can combine with other documents to produce an impact analysis covering affected systems, stakeholders, risks, testing, deployment activities and documentation updates.

## Process Flow

## Impact Considerations

| Area          | Potential Impact                                |
|---------------|-------------------------------------------------|
| Business      | Updated workflows and user communication        |
| Technical     | API, database, UI, integrations                 |
| Testing       | Regression, security and performance validation |
| Operations    | Deployment planning and monitoring              |
| Documentation | User guides, release notes and SOP updates      |

## Approval

| Role             | Name | Status  |
|------------------|------|---------|
| Business Analyst |      | Pending |
| Technical Lead   |      | Pending |

|                 |  |         |
|-----------------|--|---------|
| Project Manager |  | Pending |
|-----------------|--|---------|
